What the videos look like

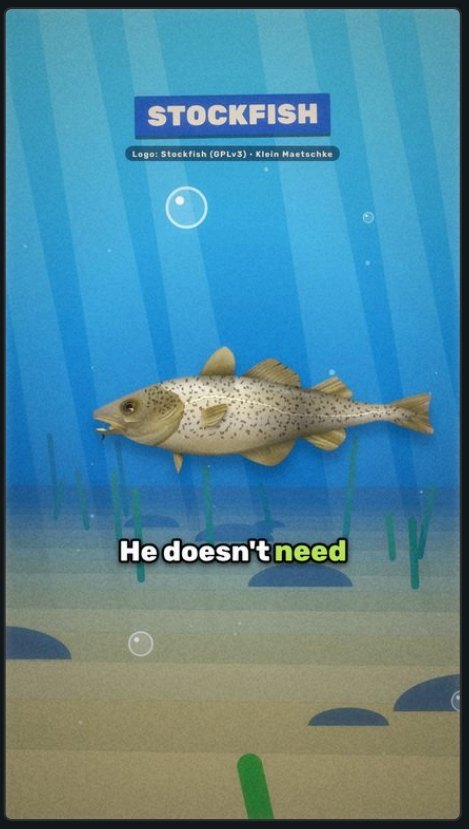

Every scene is a 3D set built in code: the boards play the real games, numbers come from real data, the voice tells one story in about a minute.

The hook: the payoff in the first frame

Records and numbers as events

A visual pun for every metaphor

Working with brands

- A story video built around your product: it lives inside the 3D world of the story, so viewers see what it does instead of an unboxing.
- Your product inside one of our regular stories.
- Every brand video names you in the voiceover and the caption, carries your link in our bio and TikTok's Branded content label.
- Rates, usage rights for your own ads and timelines on request.
